

monitor:i

Server monitoring of well known distributors such as HP, DELL, Lenovo, Cisco.

Virtual infrastructure: Monitoring of virtual infrastructure (VMware, Microsoft Hyper-V, Citrix)

Safety: By using encryption it is possible to protect the communication between the server and the agents. Certificate-based encryption is also supported.

monitor:i supports tracking IT infrastructure without using an agent. This method is currently supported for the following services: FTP, IMAP, HTTP, HTTPS, LDAP, NNTP, POP3, SMTP, SSH, TCP | Telnet.

monitor:i supports tracking IT infrastructure using services (agents) without additional set-up and configuration on independent platforms including tracking and gathering events and alarms for hardware components on servers, temperature, ventilation, electrical power supply, memory and processor status. The agent is installed by copying it to the system and starting the service.

Agent installation is supported on the following operating systems: Windows, Linux, Mac OS, IBM AIX, FreeBSD, NetBSD, OpenBSD, HPUX i Solaris.

CHARACTERISTICS

Scalable solution for tracking network parameters, their availability and the integrity of the system itself with modern reporting mechanisms.

The possibility of creating different alerts, email, push and SMS notifications.

It is suitable for system capacity planning, reporting and data display are based on stored data.

Installation of the solution requires minimal resources (up to 500 hosts and parameters - 6CPU, 6GB RAM, 300GB HDD).

Integration with existing solutions (API communication with "ticketing"/"help desk" solutions). Possibility of integration with the system for central user logging (LDAP & AD).

MOBILE PLATFORM SUPPORT

Software solution that provides possibility of distribution to mobile platforms (Android and IOS).

TECHNICAL SUPPORT

Technical support that is available in 8x5 or 24x7 models.

ADVANTAGES

Possibility of expanding functionality
Adaptability according to user needs
Fast implementation
Local support

POSSIBILITIES

Using the monitor:i solution, we can monitor:

- Servers from well-known manufacturers such as HP, DELL, Lenovo, Cisco.
- Network equipment (Cisco, Juniper, HP...). Adaptability as needed
- UPS and air conditioners.
- Services (DNS, FTP, HTTP, SMTP, ...)
- Log files.
- Data storage systems.
- Virtual infrastructure (VMware, Hyper-V, Citrix).
- Database
- Printers
